

## CLAIMS

1. Kit for remote control of the shutter release of photographic equipment (2) and the like comprising a remote control device (4) preferably of the electrical or electronic type having a release switch (5) and a mount (8) for mounting the said device (4) in order to support the same on a photographic head (3) or other equipment, characterised in that a seat (11) to receive the said control device (4) is provided in the said mount (8) and the device (4) is removably housed in the said seat.
2. Kit according to claim 1 in which the said mount (8) comprises an incompletely closed annular strip (9) defining the said seat (11).
3. Kit according to claim 1 or 2 in which the said device (4) comprises an elongated body which is capable of being completely housed in the said seat (11).
4. Kit according to one or more of claims 2 or 3, in which the said mount (8) comprises an appendage (12) extending from the said strip (9) outside the seat (11) and fixing means on the said appendage (12) to secure the said mount (8) to the said head (3).
5. Kit according to claim 4 in which the said removable fixing means comprise at least one hole (13) on the said appendage (12).
6. Kit according to one or more of claims 4 or 5, comprising at least two mounts (8,14) which differ from each other in the relative position between the said strip and the said appendage.
7. Orientatable head (3) including a kit (1) according to one or more of the preceding claims in which the said mount (8,14) is removably securable to the said head in a plurality of alternative operating positions.
